## Ground Survey Report (Control Network)

### **USGS Brawley Rillito, AZ** G16PC00051

April 2019

### Executive Summary

U.S. Geological Survey (USGS) contracted with The Sanborn Map Company, Inc. (Sanborn) to provide ground survey in the support of aerial surveys of lidar for the Brawley Rillito, AZ project. A network of control and check points has been designed and implemented into the project process to establish common basis for geo-referencing of the lidar and photography data products. A total of twenty-seven (27) Ground Control Points (GCP), seventy-six (76) Non-vegetated Vertical Accuracy (NVA) check points, and fifty-nine (59) Vegetated Vertical Accuracy (VVA) check points were established. All GCP will serve for lidar calibration; NVA and VVA check points will be utilized to validate the accuracy of the lidar data.

The survey of ground control and check points meets a final adjusted RMS 1/3 of the required product accuracy for (USGS – QL2) Lidar.

The local network was designed, processed and adjusted using Trimble Business Center (TBC) version 5.00. Final horizontal coordinates are projected in NAD83 (2011), UTM Zone 12 North, NAVD88 (Geoid12B), Meters. A version of the coordinates will also be provided in NAD83 (2011), Albers Equal Area, NAVD88 (Geoid12B), Meters.

# Introduction

This report contains the technical write-up of the differential GPS surveys performed in support of lidar products.

Sanborn oversaw the survey team(s) for execution of the survey, all fieldwork including reconnaissance of existing control points, establishment of additional control points, GPS surveys. All GPS data processing and reductions were performed in support of the Brawley Rillito, AZ project. **Figure 1** illustrates the initial survey plan within the project Area of Interest (AOI).

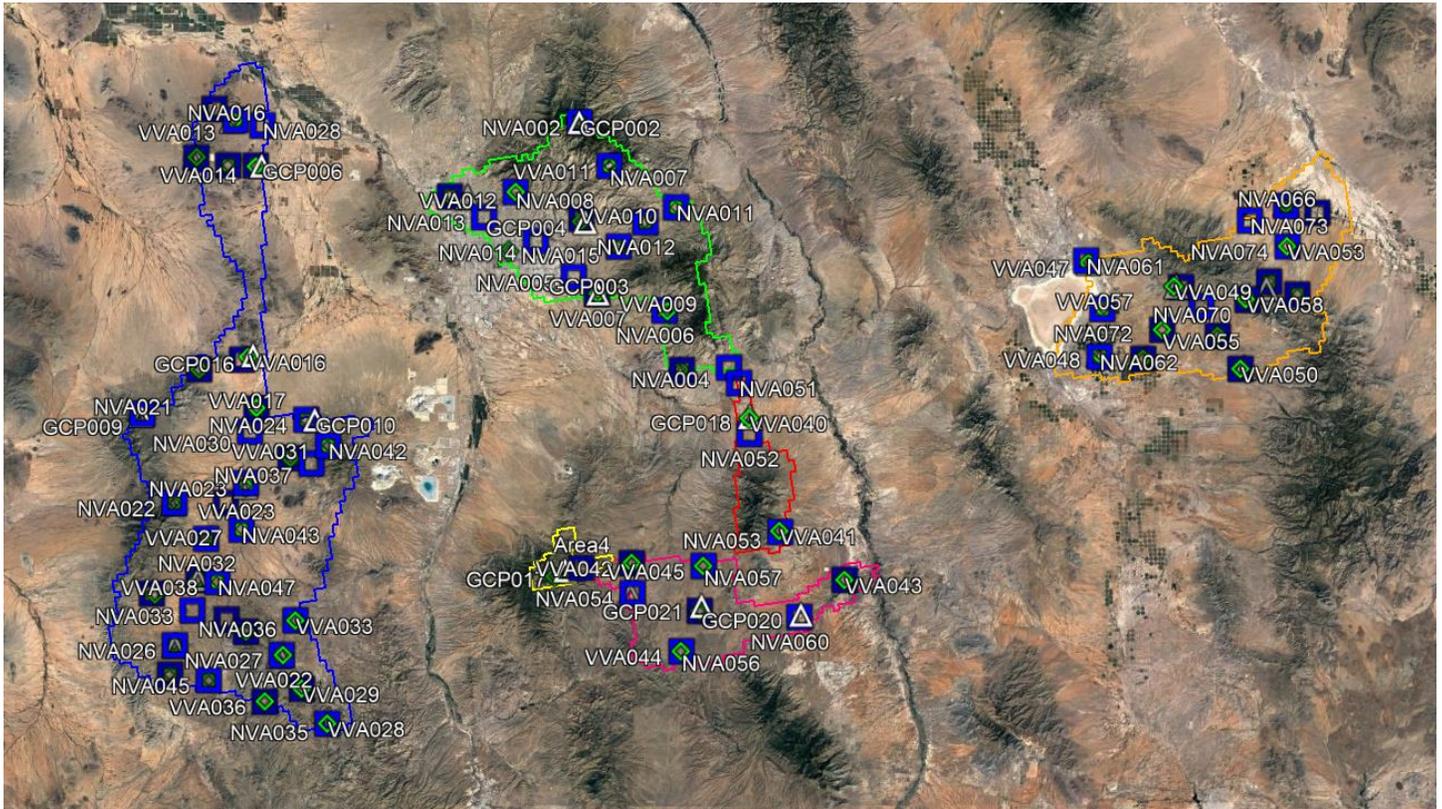

Figure 1: Survey Plan and AOI

## Survey Purpose

---

The GPS Network Survey includes twenty-two (22) control point(s): NGS CORS (P014), NGS Monuments (AI1931, AI1933, CG0402, CG0428, CG0516, CG0804, CG1173, CG1187, CG1224, CY0333, CZ1832, CZ2397, CZ2529, DH5763), and Leica SmartNet (AZAM, AZCA, AZDT, AZMA, AZSM, AZWX, TUCS). The control points are tied to twenty-seven (27) Ground Control Points: GCP001 – GCP027; seventy-six (76) Non-vegetated Vertical Accuracy: NVA001 – NVA076; fifty-nine (59) Vegetated Vertical Accuracy: VVA001 – VVA059, for the GPS Log Sheets of the observed points see **Attachment A**. The NGS Data Sheets, OPUS Reports, and Trimble CenterPoint RTX Reports referenced for the control points can be found in **Attachment B**. **Attachment C** contains the TBC Baseline Processing Reports. **Attachment D** contains the photos of the observed points in the GPS Network Survey. The sketches of the observed points can be found in **Attachment E**. The ground control points were strategically positioned to satisfy aerial survey requirements for the area of interest (AOI).

## Duration/Time Period

---

The ground control survey was performed from March 23<sup>rd</sup>, 2019 to April 3<sup>rd</sup>, 2019.

## Equipment

---

The ground control survey was performed using survey grade Trimble R8 L1/L2 GPS Antennas attached to 2 meter fixed height rods, leveled over each point in the center of the targets.

## Field Procedures

---

A careful reconnaissance was undertaken prior to the monumentation and subsequent GPS survey. The satellite window provided a minimum of 4 hour constellation coverage; GPS observation sessions were scheduled between 08:00 and 18:00 local time. All baseline processing, analysis, and preliminary reductions were performed upon receiving the data for quality control. No difficulties were experienced during this survey.

Personnel navigated to points using local maps, or GPS navigation. The field crews had approximate geodetic coordinates loaded for the required observation points. Upon arriving at the desired location the field personnel initiated a search for the point locations. The receiver was set on the 2 meter fixed height rod and leveled over the point. The GPS survey was set up as FastStatic connected via session to the established base station located at the NGS Monument. Field crew members followed a session schedule established by office personnel to facilitate observation location and duration.

The survey data sheet was produced with the following information: Point ID, Stamping (if available), Date, Observer Name, Antenna Height Measurement Point, Antenna Height, Start Time and End Time. Digital photographs were taken at each point showing the control point surveyed and its relationship to its surroundings.

## Processing

---

All static baselines and vectors for the Brawley Rillito, AZ project were processed using Trimble Business Center (TBC) version 5.00 software. Fixed solutions were adopted for all baselines using the broadcast ephemeris.

NAD83 (2011) was utilized and incorporated into the reductions, thereby allowing rigorous interpolation of the geoidal undulation values at each point in the network. This provides a useful method of estimating the elevations at all points in the network. The Survey Network Diagrams (Appendix A) and the Final Adjusted Coordinates (Appendix B) can be found below.

# Accuracy

---

Lidar Category	Value
RMSE <sub>z</sub> (m)	≤0.100
@ 95-Percent Confidence Level (m)	≤0.196

Table 1: Lidar Absolute Accuracy Requirements

The final survey networked coordinates yielded station levels of 0.013m horizontally (X, Y) and 0.044m vertically (Z) at 2σ or (95-Percent Confidence Level) meeting and/or exceeding project requirements.

## Coordinate Reference System

---

<b>Horizontal Datum:</b>	North American Datum of 1983 (2011)
<b>Projection:</b>	Universal Transverse Mercator Zone 12 North
<b>Vertical Datum:</b>	North American Vertical Datum of 1988
<b>Geoid Model:</b>	Geoid12B
<b>Units:</b>	Meters
