SECTION 1: SURVEY REPORT

INTRODUCTION

Report Date: 1/7/2015

Project Name: Elwah River LiDAR 2014 with Modification

Client Information: USGS

Contract Number: G10PC00057

Requisition/Reference Number: G14PD00287

Date of Contract: 9/23/2014

Delivery Date: 9/23/2015

Prepared By: David Kuxhausen, PLS

Woolpert Project Number: 74275

This report contains a comprehensive outline of the LiDAR Ground Control Survey that supported the Elwah River LiDAR 2014 with Modification. All surveys were performed in such a way as to achieve ground control accuracies that meet or exceed the National Mapping Accuracy Standards.

PROJECT AREA

The project area consists of approximately 100 square miles encompassing the Elwah River and surrounding areas.

PURPOSE

The purpose of this survey was to establish three-dimensional coordinates for 25 ground control points (GCPs) and a minimum of 141 quality control (QC) points in each of the land cover classifications in Bare Earth and Weeds and Crops.

The GCPs were located on open, bare earth surfaces with a level slope to enable effective assessment of swath-to-swath reproducibility and absolute accuracy. The QC points were collected uniformly dispersed over the project area in the appropriate land cover categories to verify fundamental, supplemental, and consolidated vertical accuracies throughout the task order AOI.

DATE OF SURVEY

Ground control field operations took place on November 19th 2014 thru November 21st 2014.

MONUMENTATION

Prior to aerial imagery acquisition, Woolpert field crews performed a field reconnaissance to verify the existence and suitability of pre-selected existing National Geodetic Survey (NGS) control stations. These existing bench marks were utilized as checks to ensure that quality x, y, and z coordinate values were computed for each of the newly established photogrammetric control stations. Recovery information sheets for the existing NGS control stations can be found in Section 5 of this report. A control diagram showing the ground control stations used to support this LiDAR mapping project can be found in Section 6 of this report.

ACCURACY STANDARDS

The data collected under this task order shall meet the National Standard for spatial Database Accuracy (NSSDA) standards. The NSSDA standards specify that vertical accuracy be reported at the 95 percent confidence level for data tested by an independent source of higher accuracy.

The Fundamental Vertical Accuracy (FVA): 18.13 cm at a 95% confidence level, derived according to NSSDA, i.e., based on RMSE_z of 9.25 cm in the “open terrain” land cover category.

The Supplemental Vertical Accuracy (SVA): The SVA will be reported for each of the land cover classes within the task order AOI. The target SVA is 26.9 cm at a 95th percentile level, derived according to ASPRS Guidelines, Vertical Accuracy Reporting for Lidar Data, i.e., based on the 95th percentile error for each required land cover class.

The Consolidated Vertical Accuracy (CVA): 26.9 cm at a 95th percentile level, derived according to ASPRS Guidelines, Vertical Accuracy Reporting for Lidar Data, i.e., based on the 95th percentile error in all land cover categories combined.

Automated and manual filtering for lidar products shall use the following minimum performance for artifact/feature removal from the bare earth model: The bare earth surface model shall have a minimum of 95% of surface canopy artifacts, including buildings, vegetation, bridges or overpass structures removed.

GPS EQUIPMENT

Woolpert utilized 2 Trimble Navigation R8 Model 4 GNSS dual-frequency GPS receivers with a Trimble TDL-450 radio as dual base stations. Additionally, Woolpert utilized a Trimble Navigation R8 Model 3 GNSS dual-frequency GPS receiver and a TSC3 data collector as a rover for this project.

METHODOLOGY

REAL-TIME KINEMATIC (RTK) GPS

The field crew utilized Real-Time Kinematic (RTK) GPS surveying throughout most of the ground control data collection process. Using RTK GPS techniques, observations were performed on a total of 25 LiDAR control points and 156 ground control quality check points. The survey was conducted using a 5-second epoch rate, in a fixed solution RTK mode, with each observation lasting between 60 to 180 seconds. Each station was occupied twice to insure the necessary horizontal and vertical accuracies were being met for this photogrammetric project.

FAST-STATIC GPS

In addition to the RTK GPS techniques, the project field crew utilized Fast-static GPS surveying techniques on the three temporary survey marks that were established within the project area using a 5-second epoch collection rate.

Using Fast-Static GPS techniques, observations were performed on three (3) Temporary control points and one NGS mark named 944 4090 A TIDAL (PID# TR2551). The survey was conducted at a 5-second sync rate with each observation lasting between 4-10 hours.

GPS DATA ANALYSIS AND PROCESSING

The field crew chief processed all session baselines each day using Trimble Navigation's Trimble Business Center (TBC) Version 3.40 baseline processor with the accompanying broadcast ephemeris. Daily processing ensured the integrity of the network as it was constructed, and allowed the field crews to immediately reschedule observations of poor baselines. Once the field work was complete, the processed baselines were then run through a rigorous loop closure analysis. As a result of this analysis, unacceptable GPS vectors were removed and field blunders, if any, were detected and eliminated. Once this process was completed, both unconstrained and constrained adjustments were conducted in order to effectively incorporate the static observation data.

The GPS base stations and constrained geodetic control stations consisted of the following:

Point Designation	NGS PID	Type	Constrained
100	N/A	TSM	3d
101	N/A	TSM	3d
102	N/A	TSM	3d
944 4090 A TIDAL	TR2551	NGS	2d

Stations 100, 101 and 102 were used as temporary control base stations. These points were

established by utilizing the 5-second epoch static data that was collected over a three day period. The raw data was sent to the NGS Online Positioning User System "OPUS" to establish the final coordinates. The NGS mark 944 4090 A TIDAL and its associated horizontal datasheet coordinates were also used as one of the primary geodetic control marks on this project.

DATUM REFERENCE AND FINAL COORDINATES

New horizontal GPS control within the Elwah River LiDAR project area was based on the UTM Coordinate System Zone 10 North, referenced to North American Datum 1983, national re-adjustment of 2011 (NAD83/2011) epoch 2010.00, expressed in meters. All vertical control was based on the North American Vertical Datum of 1988 (NAVD88), also expressed in meters. These coordinates for the LiDAR control survey can be found in Section 2 of this report.

QUALITY ASSURANCE

Existing NGS published bench marks were surveyed to assure that there were no discrepancies in the field observation data. Close examinations of the residuals showed no distortions in orientation or scale.

The ground control data meets positional accuracies necessary to support 1.0 point per 0.3 meters squared (1' GSD) data at 95% confidence level as outlined in the *Geospatial Positioning Accuracy Standards, Part 3: National Standard for Spatial Data Accuracy (NSSDA)*, published by the Federal Geographic Data Committee (FGDC-STD-007.3-1998).

SECTION 2: GROUND/GEODETIC CONTROL COORDINATE LISTINGS

COORDINATE SYSTEM: GRID

HORIZONTAL DATUM: NAD83 2011 UTM Zone 10-N

VERTICAL DATUM: NAVD88

ZONE: 10-North

GEOID MODEL: GEOID 12A

UNITS: Meters

SECTION 3: GROUND/GEODETIC CONTROL LOGS AND PHOTOS

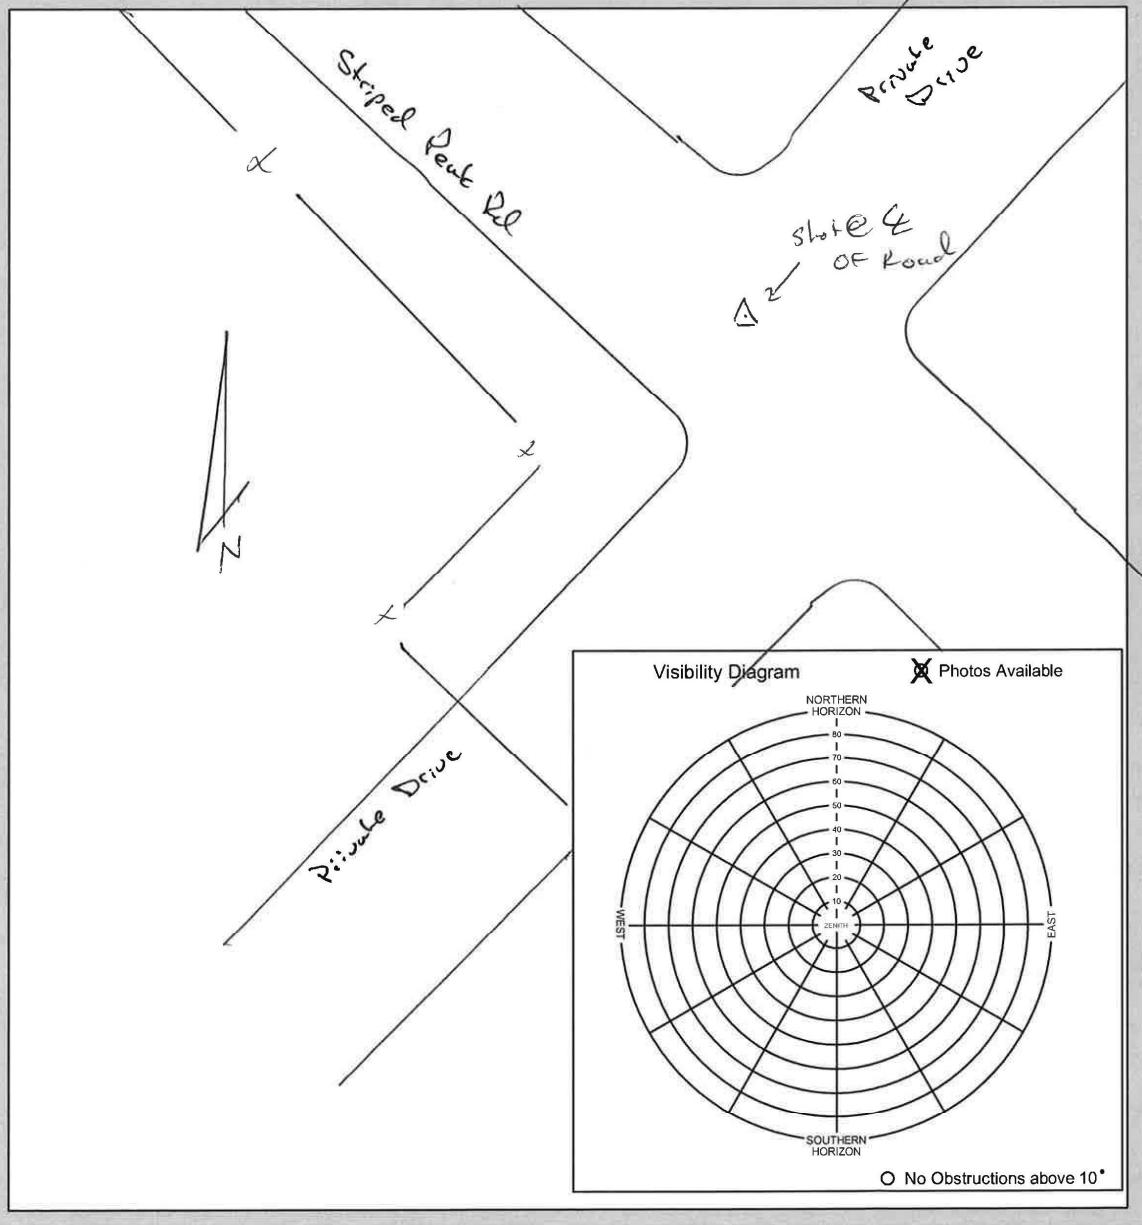

This section contains the station recovery information sheets and photographs for the ground control, geodetic control and checkpoint stations established for the project. The stations appear as they are ordered in the final coordinate listing of Section 2.

The data is assembled on the following pages.

Elwah River LiDAR Survey - LiDAR Control

LiDAR Control point #	General location	Ground Class
1000	Port Angeles WA	Gravel Road

TR2551 values and other accuracy information.
TR2551
TR2551
TR2551.The horizontal coordinates were established by GPS observations
TR2551.and adjusted by the National Geodetic Survey in June 2012.
TR2551
TR2551.NAD 83(2011) refers to NAD 83 coordinates where the reference
TR2551.frame has been affixed to the stable North American tectonic plate. See
TR2551.NA2011 for more information.
TR2551
TR2551.The horizontal coordinates are valid at the epoch date displayed above
TR2551.which is a decimal equivalence of Year/Month/Day.
TR2551
TR2551.The orthometric height was determined by differential leveling and
TR2551.adjusted by the NATIONAL GEODETIC SURVEY
TR2551.in December 2012.
TR2551
TR2551.This Tidal Bench Mark is designated as VM 1118
TR2551.by the CENTER FOR OPERATIONAL OCEANOGRAPHIC PRODUCTS AND SERVICES.
```

TR2551

TR2551. [Photographs](#) are available for this station.

TR2551

TR2551.The X, Y, and Z were computed from the position and the ellipsoidal ht.

TR2551

TR2551.The Laplace correction was computed from DEFLEC12A derived deflections.

TR2551

TR2551.The ellipsoidal height was determined by GPS observations

TR2551.and is referenced to NAD 83.

TR2551

TR2551.The dynamic height is computed by dividing the NAVD 88

TR2551.geopotential number by the normal gravity value computed on the

TR2551.Geodetic Reference System of 1980 (GRS 80) ellipsoid at 45

TR2551.degrees latitude (g = 980.6199 gals.).

TR2551

TR2551.The modeled gravity was interpolated from observed gravity values.

TR2551

TR2551. The following values were computed from the NAD 83(2011) position.

TR2551

	North	East	Units	Scale Factor	Converg.

TR2551

TR2551 STATION DESCRIPTION

TR2551

TR2551' DESCRIBED BY NATIONAL GEODETIC SURVEY 1987 (MRM)
TR2551' THE STATION WAS RECOVERED AT THIS DATE.
TR2551'
TR2551' THE STATION IS LOCATED AT PORT ANGELES.
TR2551'
TR2551' TO REACH THE STATION FROM THE INTERSECTION OF LINCOLN STREET AND
TR2551' FRONT STREET IN PORT ANGELES, GO WEST FOR 0.6 KM (0.4 MI) ON FRONT
TR2551' STREET TO A FORK.
TR2551' FOLLOW THE RIGHT FORK AND GO WEST FOR 1.05 KM (0.65 MI) ON MARINE
TR2551' DRIVE TO A FIRE HYDRANT AND POWER POLE NUMBER 125 ON THE RIGHT AND
TR2551' THE STATION.
TR2551'
TR2551' THE STATION IS A STANDARD NOS DISK
TR2551' STAMPED---4090A 1981---,
TR2551' CRIMPED TO THE TOP OF A GALVANIZED STEEL ROD ENCASED IN A 4-INCH
TR2551' PVC PIPE. LOCATED
TR2551' 13.6 METERS (44.5 FT) SOUTH-SOUTHWEST FROM THE SOUTHWEST RAIL OF
TR2551' RAILROAD,
TR2551' 2.6 METERS (8.5 FT) EAST-SOUTHEAST FROM A FIRE HYDRANT AND
TR2551' 2.3 METERS (7.5 FT) WEST-NORTHWEST FROM POWER POLE NUMBER 125
TR2551' WITH A WITNESS POST.
TR2551'
TR2551' WASHINGTON DOT, FAA, TIDE STATIONS - 1987.
TR2551'
TR2551' THIS STATION SUITABLE FOR GPS SURVEYS.
TR2551'
TR2551' DESCRIBED BY D.A. WEGENAST.
TR2551
TR2551 STATION RECOVERY (1988)
TR2551
TR2551' RECOVERED 1988
TR2551' RECOVERED IN GOOD CONDITION.
TR2551
TR2551 STATION RECOVERY (1989)
TR2551
TR2551' RECOVERY NOTE BY NATIONAL GEODETIC SURVEY 1989
TR2551' THE STATION IS LOCATED ABOUT 41.8 KM (26.0 MI) SOUTH OF VICTORIA, 27.4
TR2551' KM (17.0 MI) WEST OF SEQUIM, 24.1 KM (15.0 MI) EAST OF JOYCE AND AT
TR2551' PORT ANGELES.
TR2551' TO REACH FROM THE INTERSECTION OF LINCOLN STREET AND FRONT STREET IN
TR2551' PORT ANGELES, GO WEST ON FRONT STREET FOR 0.64 KM (0.40 MI) TO A
TR2551' FORK. TAKE THE RIGHT FORK AND CONTINUE WESTERLY ON MARINE DRIVE FOR
TR2551' 1.04 KM (0.65 MI) TO A FIRE HYDRANT, POWER LINE POLE NUMBER 125 AND
TR2551' THE STATION.
TR2551' THE MARK IS FASTENED TO THE TOP OF A COPPER CLAD STEEL ROAD SET IN A
TR2551' 4-INCH PLASTIC PIPE WITH A CAP. IT IS 2.6 M (8.5 FT) EAST-SOUTHEAST
TR2551' OF A FIRE HYDRANT AND 2.3 M (7.5 FT) WEST-NORTHWEST OF A POWER LINE
TR2551' POLE NUMBER 125 THAT HAS A WITNESS SIGN ATTACHED TO IT.
TR2551
TR2551 STATION RECOVERY (1991)
TR2551
TR2551' RECOVERED 1991
TR2551' RECOVERED IN GOOD CONDITION.
TR2551
TR2551 STATION RECOVERY (1994)
TR2551
TR2551' RECOVERY NOTE BY WOOLPERT CONSULTANTS 1994 (MJS)
TR2551' RECOVERED AS DESCRIBED.
TR2551
TR2551 STATION RECOVERY (2000)
TR2551
TR2551' RECOVERY NOTE BY US POWER SQUADRON 2000
TR2551' RECOVERED IN GOOD CONDITION.
TR2551
TR2551 STATION RECOVERY (2012)
TR2551
TR2551' RECOVERY NOTE BY WA DEPT OF TRANSP 2012 (KW)
TR2551' RECOVERED AS DESCRIBED.

SECTION 6: GPS CONTROL DIAGRAM

This section contains a graphical representation of the new and existing control stations used for the project.
