

DPH-11 Report on Absolute Vertical Accuracy - continued

The purpose of this section is to show a graphic of lidar data points colored by intensity with NVA check points rendered "thematically" showing the green and red squares sized by Z error.

- Green represents where the lidar surface is above the check point (positive elevation error).
- Red represents where the lidar surface is below the check point (negative elevation error).

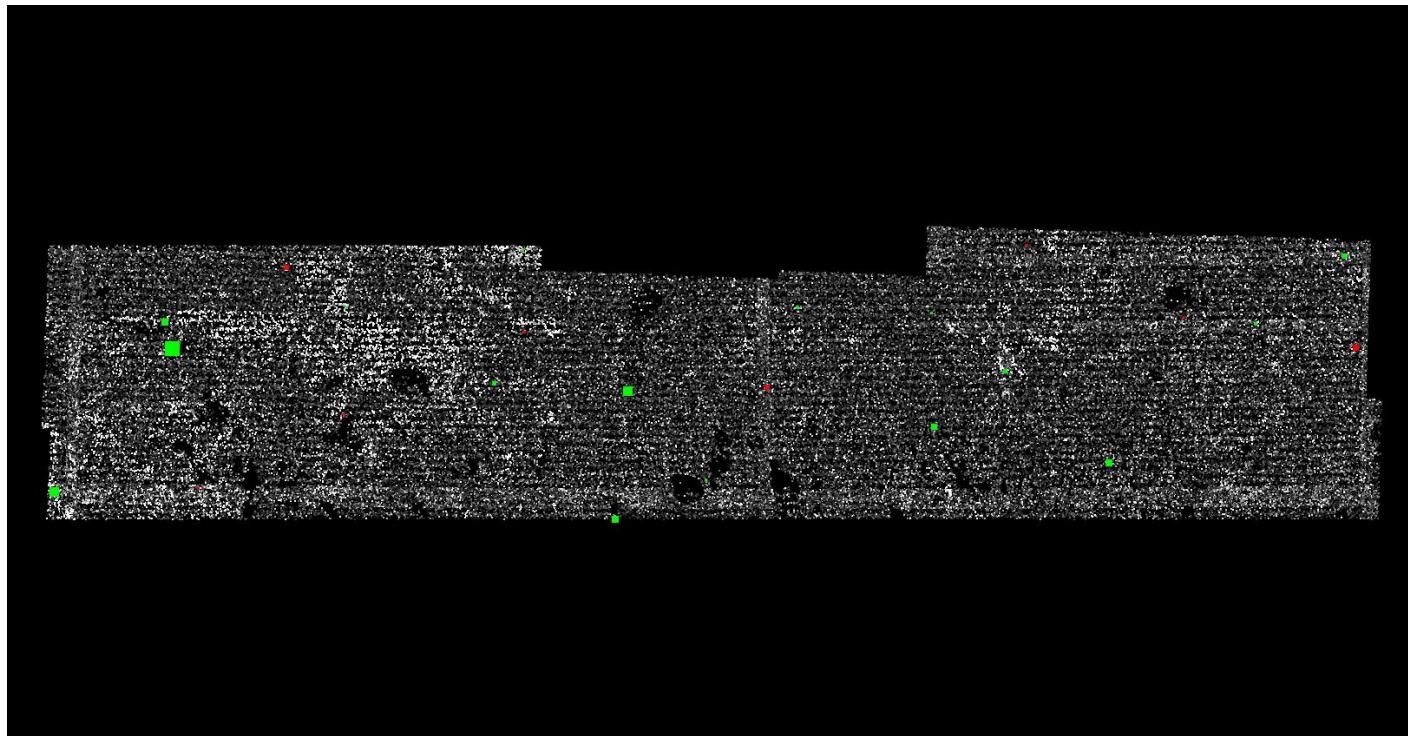

The size of the square symbol represents the absolute value magnitude of error.

- Green represents where a DEM of the lidar surface is above the check point (positive elevation error).
- Red represents where a DEM of the lidar surface is below the check point (negative elevation error).

The size of the square symbol represents the absolute value magnitude of error.
