# REPORT OF SURVEY

## CENTRAL NORTH DAKOTA

### ADD-ON

#### INTRODUCTION

Terrasurv, Inc of Pittsburgh, PA was tasked by Fugro Geospatial with performing a control survey in support of LiDAR data collection covering the eastern 15 miles of Bottineau County in north-central North Dakota. The project consisted of two parts: 8 ground control (calibration) points (GCP) and 50 quality control (QC: NVA/VVA/VVA-F), for a total of 58 new stations. The map in figure 1 shows the location of the Ground Control (GCP) and figure 2 shows the location of the QC points. The control symbology for figures 1 and 2 are listed in table 1. Also shown are the Continuously Operating Reference Stations used in the project via the Mid-States VRS/RTN Network.

Table 1 - Map Symbology and Control Quantity

Type	Symbol	VA Quantity
Ground Control (GCP)	Green Dot	8
Non-Vegetated (NVA)	Red Dot	30
Vegetated (VVA)	Red X	11
Woods (VVA-F)	Yellow X	9
CORS	White square with red “+”	2

## CONTROL

The National Spatial Reference System (NSRS) was used to provide control for the network. The Trimble [VRSNow](#) real time network (RTN) was utilized. The horizontal datum was the North American Datum of 1983 – NAD83 (2011), epoch 2010.0. The vertical datum was the North American Vertical Datum of 1988 (NAVD88), realized with the GEOID18 geoid model from the National Geodetic Survey (NGS).

## STATIONS

Table 2 lists the GCP and CP stations established in this survey, including the GCP, NVA, VVA, and VVA-F.

**Table 2 - Station List**

Station Name	GPSID	USGS Quadrangle	Description
GCP01	21012UY	LAKE KLINGENBERG	paved apron to field entrance on north side of ND 43
GCP02	21012UZ	BOUNDARY LAKE	sparse grass at west edge of field and just east of field entrance on east side of CR 57
GCP03	21012VA	BOTTINEAU	pavement in center of cul-du-sac at west end of 10th Street W
GCP04	21012VB	GARDENA	bare road surface of 12th Avenue NE on north side of 86th Street NE
GCP05	21012VC	OVERLY	sparse grass in middle of field road (23rd Avenue NE) on south side of CR 22
GCP06	21012VD	OMEMEE	sparse grass in NW quadrant of intersection of ND 60 and 91st Street NE
GCP07	21012VE	BOUNDARY LAKE	bare road surface on turn radius from 21st Avenue NE NB to 101st Street NE
GCP08	21012VF	WILLOW CITY	bare road surface in EB travel lane of 81st Street NE just east of ND 60

The stations were not permanently marked.

## METHODOLOGY

The field survey was done by using a Trimble R10 multi-frequency, multi-constellation GNSS receiver in a real time (RTK/VRS) mode. Corrections were obtained from the Trimble VRSNow VRS network with corrections delivered over the cellular network. These corrections are applied in real time and used by the rover receivers to converge to a cm level solution. Each station was occupied once for 2 to 3 minutes (120 to 180 epochs), then re-initialized and occupied a second time immediately after the first occupation. The solutions are stored as vectors from the nearest physical CORS. Eight of the nine woods checkpoints were occupied directly. One station, VVAF04 (GPSID 21012WN), was surveyed using RTK over radio using a temporary local base station (21012Z) nearby and was also surveyed directly using the RTN. Table 3 summarizes the VRS/RTK occupations (precisions in meters):

As mentioned, each station was occupied twice (or more if needed) in succession. The Earth Centered Earth Fixed (ECEF) vector differences were rotated into a local horizon system (N, E, Up) for analysis. Stations which had observations that differed by more than 0.03 m in the vertical component were re-observed until agreement was achieved. Figure 4 summarizes the repeat baseline analysis.

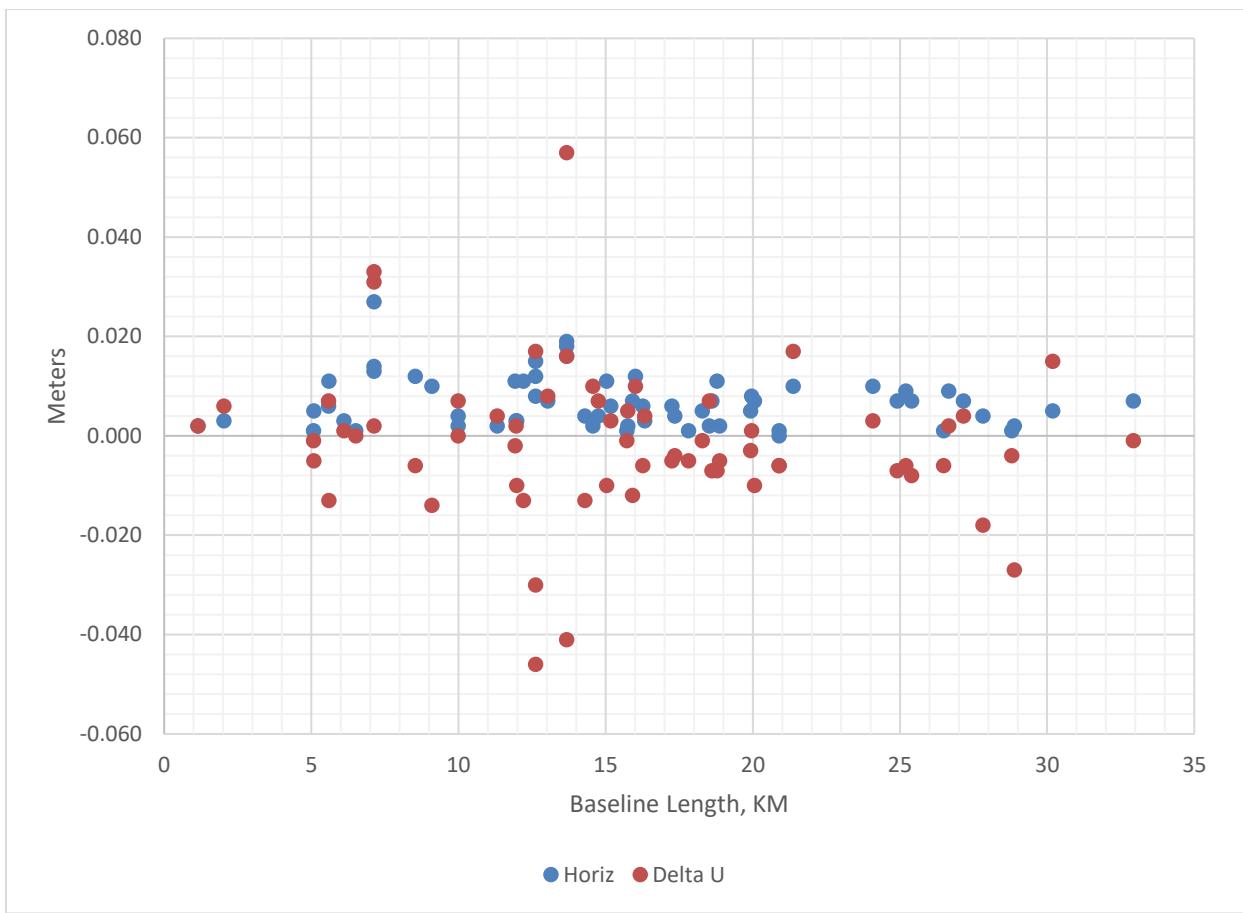

Figure 3 - Repeat Baseline Analysis

## LEAST SQUARES ADJUSTMENTS

Geolab was used to adjust the VRS/RTK vectors. No scaling of the apriori GPS statistics was done. Station errors (centering, HI and HT) of 0.005 m were input. The GEOID18 model was used.

The adjustment constrained the VRS CORS positions (as computed and broadcast by the network) in all three dimensions (NAD83 (2011) latitude, longitude, and ellipsoidal height). The error factor was 0.16. This adjustment provided the adjusted positions (NAD83 (2011) epoch 2010.0) and GPS derived orthometric heights (NAVD88) for the stations in the network. The adjusted latitude/longitudes were transformed to UTM Zone 14 grid coordinates. At the request of the client, the positions were also transformed to NAD83 (NSRS2007) using the NGS Coordinate Conversion and Transformation (NCAT) tool.

## SUMMARY

A LiDAR ground control network was established in north central North Dakota. The estimated accuracy of the control network is  $\pm 0.05$  m with respect to the NAD83 (2011) epoch 2010.0 reference frame and the NAVD88 vertical datum (using GEOID18). Table 5 lists the NAD83

(2011) and NAD83 (NSRS2007) UTM Zone 14 coordinates, NAVD88 GPS derived orthometric heights, NAD83 (2011) ellipsoidal heights, and the vertical accuracies at the 95% confidence level, in meters.
