REPORT OF SURVEY

NORTH DAKOTA PHASE 10

INTRODUCTION

Terrasurv, Inc of Pittsburgh, PA was tasked by Fugro Geospatial with performing a control survey in support of LiDAR data collection covering Renville County and the western portion of Bottineau County in northern North Dakota. The phase 10 project consists of four blocks: A, B, C, and D. The current project includes Block A only, Blocks B, C, and D were previously surveyed. The project consisted of two parts: 15 ground control (calibration) points (GCP) and 82 quality control (QC: NVA/VVA/VVA-F), for a total of 97 new stations. The map in figure 1 shows the location of the Ground Control (GCP) and figure 2 shows the location of the QC points. The control symbology for figures 1 and 2 are listed in table 1. Also shown are the Continuously Operating Reference Stations used in the project via the Trimble VRSNow VRS/RTN Network.

CONTROL

The National Spatial Reference System (NSRS) was used to provide control for the network. The Trimble [VRSNow](#) real time network (RTN) was utilized. The horizontal datum for processing was the North American Datum of 1983 – NAD83 (2011), epoch 2010.0. The vertical datum was the North American Vertical Datum of 1988 (NAVD88), realized with the GEOID12B geoid model from the National Geodetic Survey (NGS). This superseded geoid model was used at the request of the client.

STATIONS

Table 2 lists the GCP and CP stations established in this survey, including the GCP, NVA, VVA, and VVA-F, as well as the CORS.

METHODOLOGY

The field survey was done by using a Trimble R10-2 multi-frequency, multi-constellation GNSS receiver in a real time (RTK/VRS) mode. Corrections were obtained from the VRSNow network with corrections delivered over the cellular network. These corrections are applied in real time and used by the rover receiver to converge to a cm level solution. Each station was occupied once for a minimum of 2 minutes (120 epochs), then re-initialized and occupied a second time immediately after the first occupation. Additional observations were made if necessary to ensure agreement at the 0.033 m level. The solutions are stored as vectors from the nearest physical CORS. Table 3 summarizes the VRS/RTK occupations (precisions in meters).

As mentioned, each station was occupied twice (or more if needed) in succession. The Earth Centered Earth Fixed (ECEF) vector differences were rotated into a local horizon system (N, E, Up) for analysis. Stations which had observations that differed by more than 0.033 m in the vertical component were re-observed until agreement was achieved. Figure 3 summarizes the repeat baseline analysis.

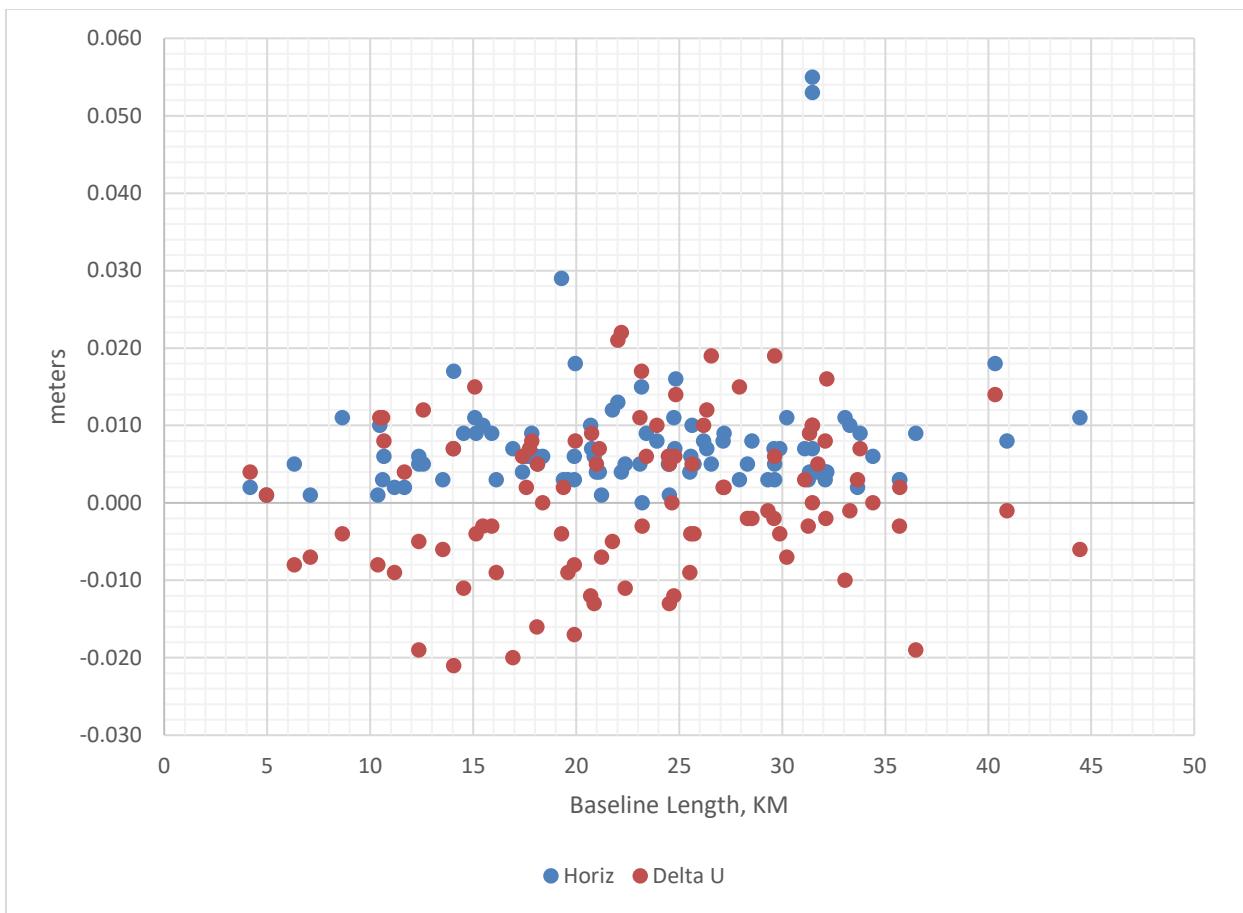

Figure 3 - Repeat Baseline Analysis

LEAST SQUARES ADJUSTMENTS

Geolab was used to adjust the VRS vectors. No scaling of the apriori GPS statistics was done. Station errors (centering, HI and HT) of 0.005 m were input. The GEOID12B model was used.

The adjustment constrained the VRS CORS positions (as computed and broadcast by the network) in all three dimensions (NAD83 (2011) latitude, longitude, and ellipsoidal height). The error factor was 0.19. This adjustment provided the adjusted positions (NAD83 (2011) epoch 2010.0) and GPS derived orthometric heights (NAVD88) for the stations in the network. The adjusted latitude/longitudes were transformed to UTM Zone 14 grid coordinates. At the request of the client, the positions were also transformed to NAD83 (NSRS2007) using the NGS Coordinate Conversion and Transformation (NCAT) tool, and NAVD88 GPS derived orthometric heights were also computed for this datum realization using GEOID12B. Table 4 lists the error ellipses at the 95% level.

SUMMARY

A LiDAR ground control network was established in northcentral North Dakota. The estimated accuracy of the control network is ± 0.03 m with respect to the NAD83 (2011) epoch 2010.0 reference frame and the NAVD88 vertical datum (using GEOID18). Table 6 lists the adjusted NAD83(2011) epoch 2010.0 UTM Zone 14 coordinates, the transformed NAD83 (NSRS2007) UTM Zone 14 coordinates and the NAVD88 GPS derived orthometric heights based on the NAD83(NSRS2007) ellipsoidal heights and the GEOID12B model.

Horizontal Datum: NAD83 (2011) epoch 2010.0 and transformed NAD83(NSRS2007)

Vertical Datum: NAVD88=NAD83(NSRS2007) Ellipsoidal Heights-GEOID12B

UTM Zone: 14

Units: meters
