I. INTRODUCTION

This report summarizes the results of a ground control survey requested by Merrick & Company for mapping in Wichita/Sedgwick County Kansas. The purpose of the survey was to establish horizontal and vertical control on 65 imagery points, 93 LiDAR check points and 120 Truthing points which were measured on site for mapping control. The GPS network is related to (5) NGS CORS stations broadcasting RTK data and network corrections.

II. HORIZONTAL AND VERTICAL CONTROL

The horizontal and vertical components were established by using (5) NGS CORS stations broadcasting a network correction. Each station is broadcasting a WGS84 latitude and longitude with an ellipsoid elevation. The horizontal component is then adjusted to Kansas South state plain coordinate system (NAD83). The vertical component is converted from ellipsoidal elevation to orthometric elevation using GEIODES model 2003 (NAVD88).

IV. JOB SUMMERY AND EQUIPMENT

All data for this project was collected between February 27, 2008, April 25, 2008.

All Imagery Points and LiDAR Check Points are based on a mean average of 30 epics, which were acquired by 3 separate 10 epic sessions.

All Truthing Points are based on an average of 10 epics acquired during one session.
